

## RIFLE STORAGE SYSTEM - PROXERSAFE

The WR6 modular weapons storage system has been designed for rifles, especially for military, police and armed forces types.

**ALL THE WEAPONS ARE IDENTIFIED BY RFID TAG AND THE SYSTEM KEEPS TRACK OF THE WEAPON USAGE DOWN TO A USER AND ACCESS TIME LEVEL.**

It has stable, modular steel frames with components to accommodate the weapons and sensors for a secure access control system. One ProxerSafe-WR6 contains six units that can be connected several times together to build a scalable system.

Components ensure that weapons can be stored with optics for quick and easy deployment. Every slot is equipped with a presence sensor, an electronic cuff lock that keeps the weapons individually safe. The system contains one or more embedded computers with built-in UPS and backup battery that ensures operation also in a power outage situation. A connected and controlled box cabinet can be used to separately store magazines.

The system is tamper proof and various alarm possibilities are available based on triggered events.

# KEEP TRACK OF YOUR WEAPONS

## HANDGUN STORAGE BOX SYSTEM

The small arms storage cabinet is aimed to safely store pistols, handguns, other items inside lockers. The system is capable to identify the firearms uniquely by RFID .

**WEIGHT SCALE INSIDE THE LOCKER DETERMINES WHETHER THE HANDGUN IS LOADED OR NOT AND SENDS ALARM BASED ON THAT.** It also prevents inserting items into pistol boxes that do not match with typical acceptable weight ranges. All lockers are equipped with RFID readers and weight bridges. Option: ammunition magazine can be stored separately. Magazines can be measured too in order to determine missing bullets.

**THE SYSTEM AUTOMATICALLY LOGS WHO HAS TAKEN, WHICH GUN, AT WHAT TIME AND ALSO WHEN IT WAS RETURNED BESIDES ALL OTHER EVENTS.**

Box cabinet systems can be combined with other locker types eg. for charging handheld radio terminals or smart devices.
